

Heliophysics notebooks in DataLabs

A. Masson, H. Middleton

Some of the Heliophysics mission data archives are already mounted in DataLabs including Solar Orbiter and Proba-2. We will present a few Helio Jupyter Notebooks that are available. In particular, we will go through one notebook developed by the EUI PI team and demonstrated at the Solar Orbiter 8 data tutorial last September. The other notebook is related to Proba-2 and was developed internally by ESDC.
