3 Data overview

```
obs[1342186064] = "small chop: y offset 31.5, z offset -3.5, skew 1.2,  
nod throw 29.8, chop throw 29.8"  
obs[1342186065] = "small chop: y offset 31.5, z offset +1.5, skew 1.2,  
nod throw 29.8, chop throw 29.8"  
obs[1342186066] = "small chop: y offset 26.5, z offset -3.5, skew 1.2,  
nod throw 29.8, chop throw 29.8"  
obs[1342186067] = "medium chop: y offset 90.5, z offset -3.5, skew  
1.2, nod throw 89.0, chop throw 89.0"  
obs[1342186068] = "large chop: y offset 180, z offset -6.0, skew 1.2,  
nod throw 177.5, chop throw 177.5"  
obs[1342186069] = "large chop: y offset 180, z offset -6.0, skew 1.1,  
nod throw 177.5, chop throw 177.5"
```

Additionally, we use OD141 measurements:

4 Line / column raster positions reconstruction

The attitude history file and pointing product for OD155 was not available at the time of processing. From a similar observation on OD141 (obsid 1342184661) we can establish the relation between BBSEQCNT in the status and the rasterline / column.

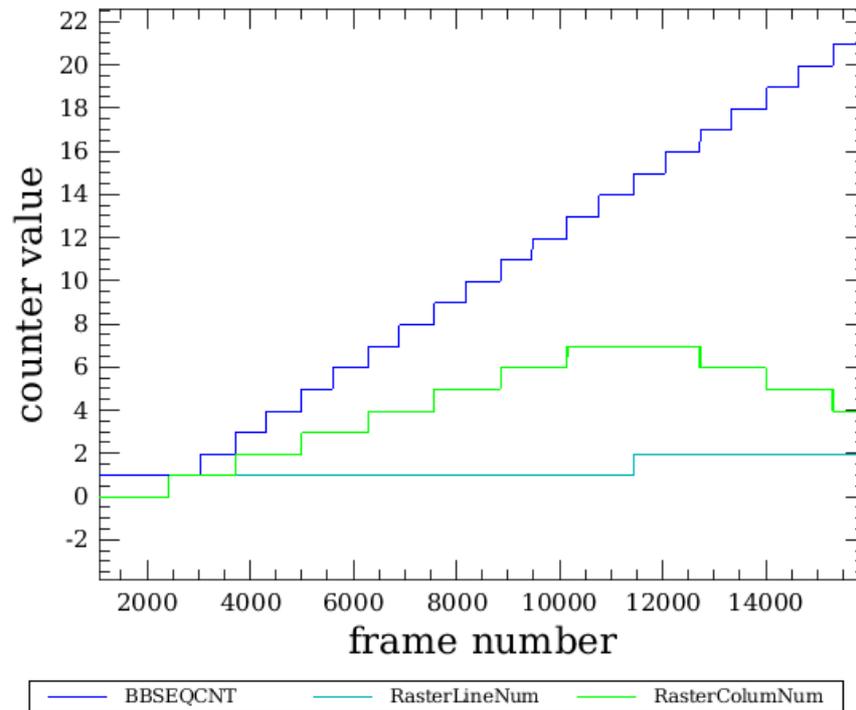

Illustration 1: Relation BBSEQCNT and raster line / raster column from OD141 observation

```
bbseqcnt = frame.getStatus("BBSEQCNT")
lineNum = (bbseqcnt-1) / 2 / 7 + 1
columnNum = (bbseqcnt-1) / 2 % 14 + 1
w = columnNum.where(columnNum > 7)
columnNum[w] = 15 - columnNum[w]
```

In order to find the chop on / off plateaus, specDiffChop needs information on nod position, which is also extracted from the pointing product. This information has been faked with:

```
frame.setStatus("AbPosId", (frame.getStatus("BBSEQCNT")%2 == 0))
frame.setStatus("IsAPosition", (frame.getStatus("BBSEQCNT")%2 == 0))
frame.setStatus("IsBPosition", (frame.getStatus("BBSEQCNT")%2 == 1))
frame.setStatus("OnTarget", frame.getStatus("DMCSEQACTIVE"))
```

5 Results

Images and contour maps below are the line flux and continuum maps. Coordinates are the spacecraft raster lines and columns with a step size of 2.5"

5.1 Small chopper throw

5.1.1 OBSID 1342186064 (OD155)

Parameters:

y offset 31.5
 z offset -3.5
 skew 1.2
 nod throw 29.8
 chop throw 29.8"

# OD335  
obsids = {}  
obsids["HIP21479"] = 1342194661
```

4 Results

Images and contour maps below are the line flux and continuum maps. Coordinates are the spacecraft raster lines and columns with a step size of 2.5"

4.1 Large chopper throw

4.1.1 OBSID 134219661 (OD335)

Source: HIP21479

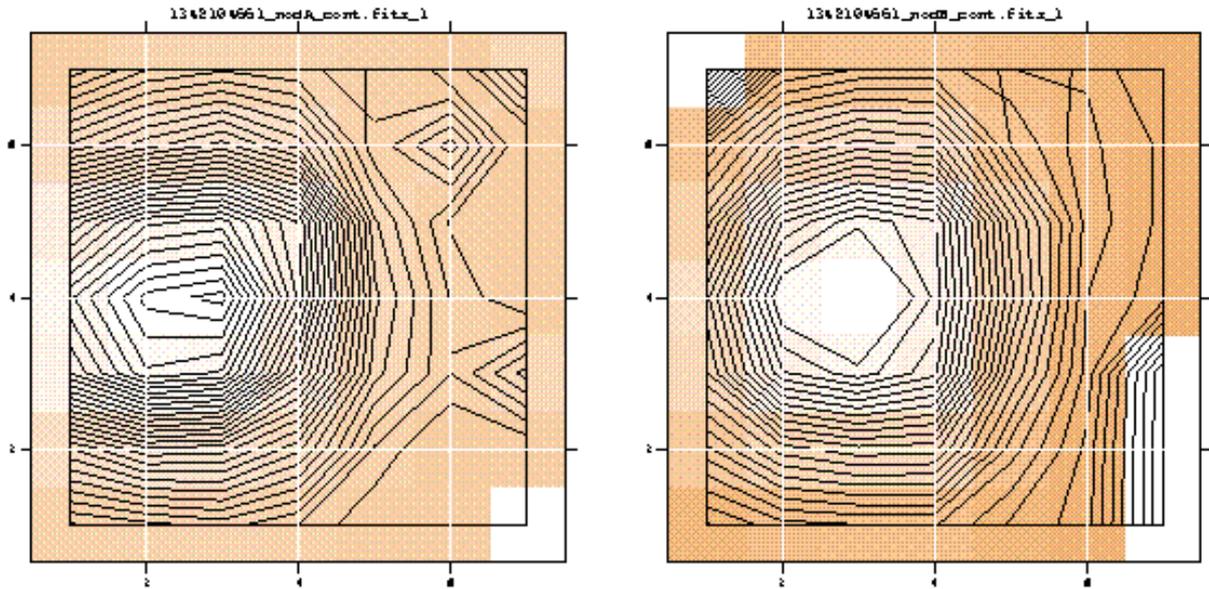

Figure 1: Continuum flux obs 134219661

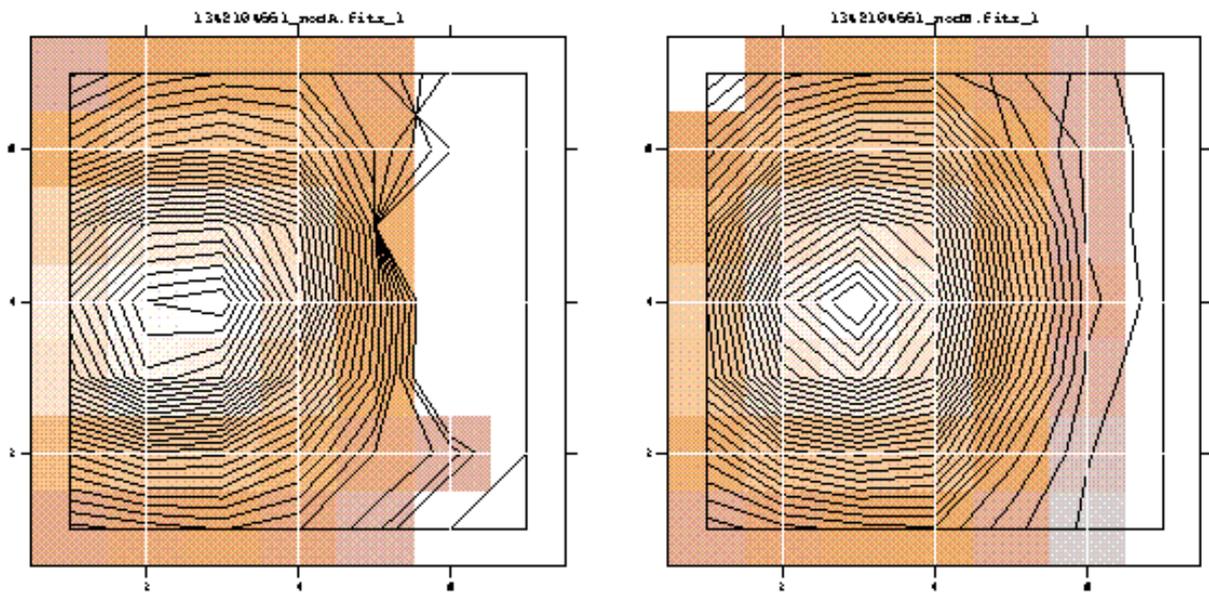

Figure 2: Line flux Obs 134219661

5 Discussion

The line and continuum maps of R Dor (HIP21479) obtained on OD 335 show an offset of 2.5" in z direction, both in nod A and nod B. If confirmed on OD 145 this can be corrected for by

- a) an update to the PACSyzoffsets CALU file: Apply a negative correction to the z offset from -3.0 to -5.5 for all 'large' lines in PACSyzoffsets
- b) an update to the SIAM.

For OD 335, uplink SIAM 0320_0002 was used. The average offsets seen in the photometer using this SIAM are (Email UK 12/04/2010):

$$\text{delta_Y} = (0.536 - 0.322) - 0.635 = -0.421''$$

$$\text{delta_Z} = (3.764 + 1.551) - 2.552 = +2.763''$$

This offset could not be confirmed from the chopped raster observations on OD330, and therefore the correction to the SIAM for these offsets seen in the photometer (uplink SIAM 0341_0001) has not yet been confirmed to be applicable for the spectrometer. The results presented here, however are compatible with the offset observed in the photometer.

The OD 345 observations (repetition of this raster at large, medium and small chopper throw) will be executed using SIAM 0320_0002. If the same offset is confirmed for all three chopper throws, the only conclusion of this exercise is that we should apply SIAM 0341_0001.

5 Summary

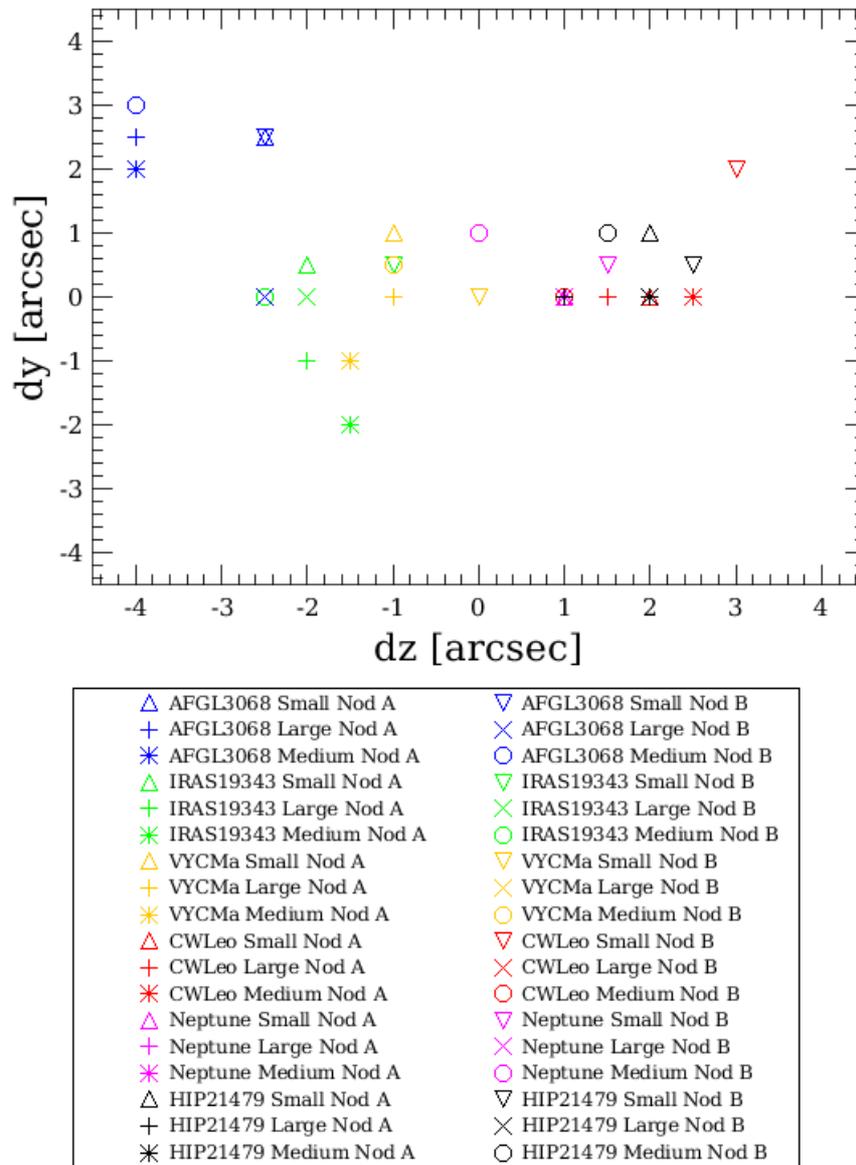

Illustration 19: Summary of offsets measured in OD 370 and OD 373

The approximate offsets are summarised in Figure 19. There is a clear clustering per source, showing that random -source related- offsets are dominating over systematics for offsets / skew angles for every chopper throw. The offsets are also centered around (0,0), indicating that no SIAM update can be concluded from these measurements. As expected, the offsets are more widely spread in z direction.
