

# First steps to standardise observatory services via VO standard protocols

**Aitor Ibarra and Jesús Salgado**  
**On behalf of the Observatory Services Group**

# THE PROBLEM:

## THE INFORMATION IS OUT THERE

All information needed to plan an observation (via AO or ToO) is currently in facilities own web pages through forms.

Target Visibility  
Constraints

Instrument  
info

Short-term  
schedule

BUT

Observations  
info

Long-term  
schedule

This information is usually shown in a web page statically and is only accessible through forms that have to be manually filled in.

# SOLUTION:

## OBSERVATORY SERVICES + STANDARIZATION

- Knowing that the information already exists in all facilities, the question is:

Why don't we standardise the information exchange to improve the efficiency to prepare observations?

## MOVE FROM OBSERVATORY TOOLS TO OBSERVATORY SERVICES

Identify which observatory tools could be easily transformed in services (if they are not already a service)

Target visibility checks  
Scheduled observation Info

- Standardise the input parameter
- Standardise the output information and format
