NEWS

CELEBRATING THE 20TH ANNIVERSARY OF THE XMM-NEWTON LAUNCH

Start Celebration - Building up

14 March 2019 | **Online presence**

| **Lectures/Conferences/Workshops**

12-14 June 2019 | **XMM-Newton Workshop**

TBD October 2019 | **XMM-Newton Exploration Lab**

10-11 December 2019 | **Main Event**

| **Online presence**

| **Lectures/Conferences/Workshops**

25-29 May 2020 | **The X-ray Universe 2020**

End Celebration - Gran Finale

ABOUT XMM-Newton

20 years in orbit and counting...

On the 10th of December 1999 at 14:32 GMT the European Space Agency's XMM-Newton observatory was launched and started exploring the wonders of the X-ray universe. Since its launch, XMM-Newton has simultaneously collected X-rays, visible and ultraviolet light and consistently demonstrated its role as one of the most important astronomical observatories of all time.

ABOUT XMM-Newton

20 years in orbit and counting...

On the 10th of December 1999 at 14:32 GMT the European Space Agency's XMM-Newton observatory was launched and started exploring the wonders of the X-ray universe. Since its launch, XMM-Newton has simultaneously collected X-rays, visible and ultraviolet light and consistently demonstrated its role as one of the most important astronomical observatories of all time.

Event at ESAC

A detailed illustration of a satellite in space. The satellite is a complex structure with a central body and two long, rectangular solar panel arrays extending outwards. It is positioned in the lower right quadrant of the frame. In the background, the Earth's horizon is visible as a bright blue and white line. To the left of the satellite, the Moon is shown as a large, cratered sphere. The sky is a deep black, filled with numerous stars and a faint, glowing band of the Milky Way galaxy. The overall scene is set in a dark, cosmic environment.
