

High Resolution X-Ray Spectra

A DIAGNOSTIC TOOL OF THE HOT UNIVERSE

Katarzyna Bensch
Rosario González-Riestra
María Santos-Lleó

XMM-NEWTON / ESAC

The RGS Instruments

THE REFLECTION GRATING SPECTROMETER

HIGH RESOLVING POWER: 7 TO 38 Å [~ 0.33 -2.5 keV]
SIMULTANEOUS OBSERVATIONS WITH EPIC AND OM

18000 RGS SPECTRA 9000 OBSERVATIONS

RGS DESIGNED TO STUDY
X-RAY EMISSION & ABSORPTION

K-SHELL TRANSITION
HELIUM-LIKE TRIPLETS OF C, N, O, Ne, Si, Ar
L-SHELL TRANSITION of Fe

DIAGNOSTIC TOOLS
TO STUDY THE X-RAY SOURCES

1. Identification of useful Spectra

FITTING THE SPATIAL PROFILES

2. Classification of spectra:

QUALITY

TOP QUALITY / LOWER QUALITY

SPATIAL EXTENT

POINT-LIKE SOURCES / EXTENDED
SOURCES

Browsing Interface for RGS Data

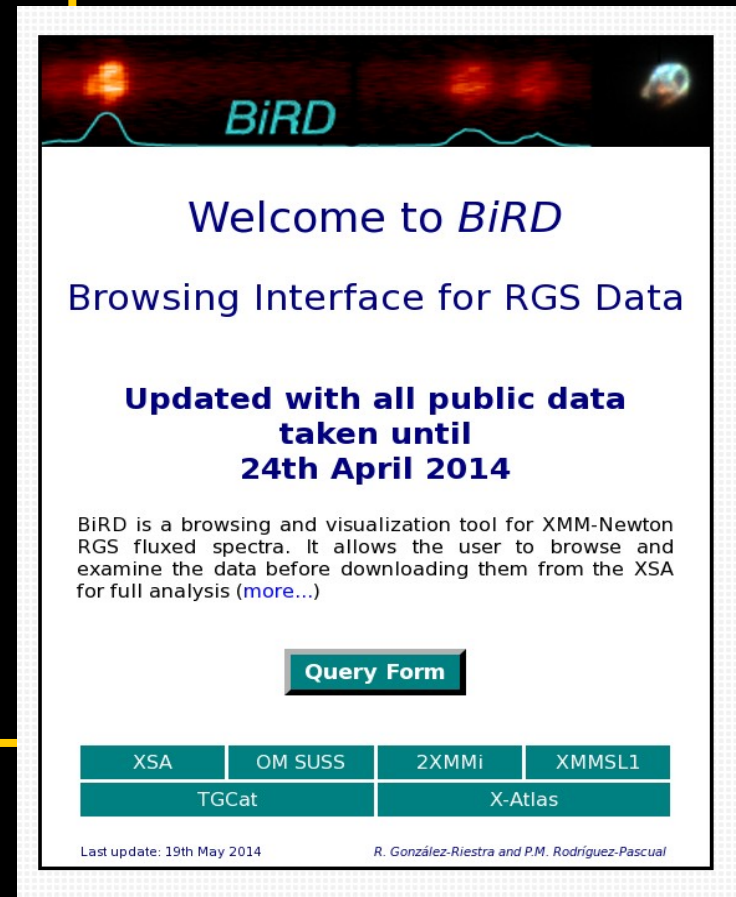

START POINT: BiRD DATABASE

ALL PUBLIC RGS 1 & RGS 2
Events file + spectra

EACH ONE HAS ASSOCIATED:

Simbad Object Class, N_h , z / v_{rad}

<http://xmm.esac.esa.int/BiRD/>

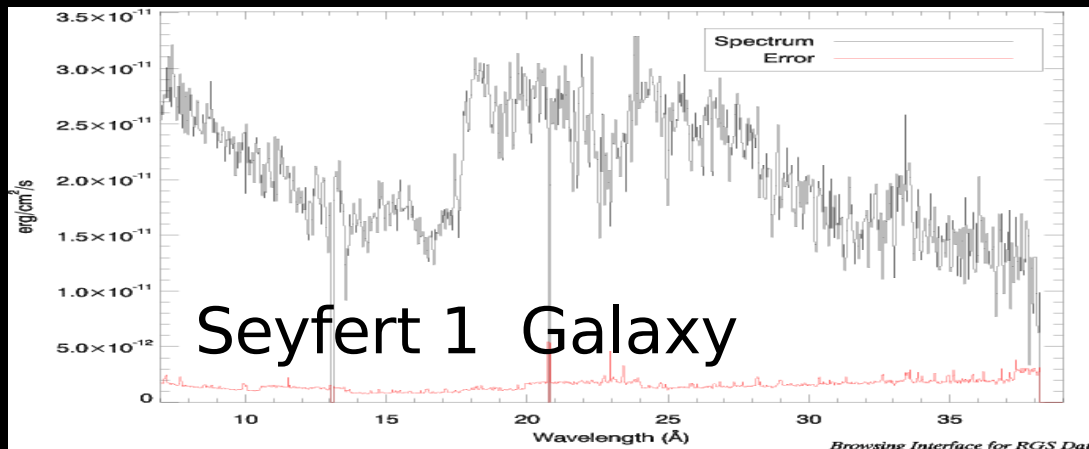

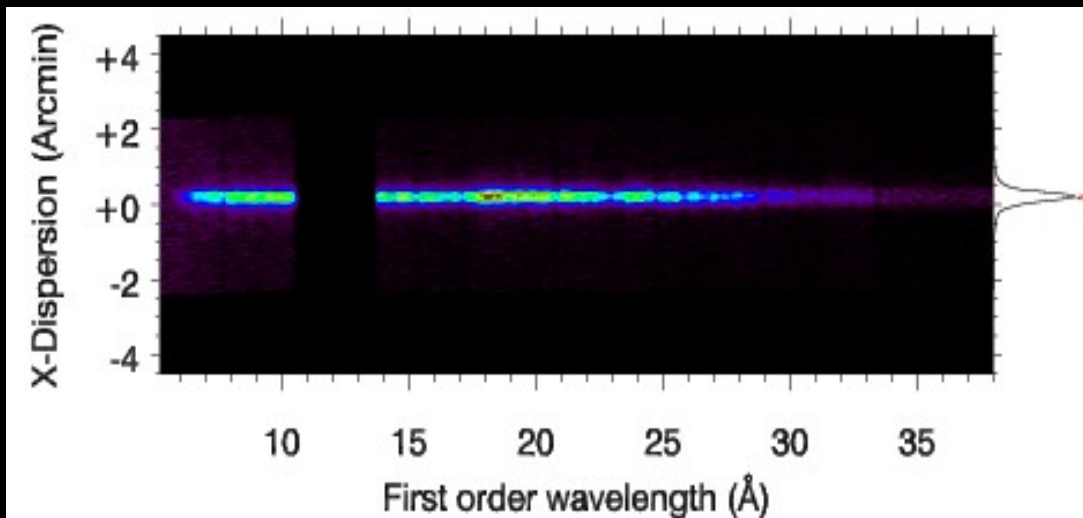

The screenshot shows the BiRD web interface. At the top, there is a header with the BiRD logo and a decorative image of X-ray sources. Below the header, the text reads: "Welcome to BiRD", "Browsing Interface for RGS Data", and "Updated with all public data taken until 24th April 2014". A paragraph describes BiRD as a browsing and visualization tool for XMM-Newton RGS fluxed spectra. Below this is a "Query Form" button. At the bottom, there is a table of data products:

XSA	OM SUSS	2XMMi	XMMSL1
TGCat		X-Atlas	

At the very bottom, it says "Last update: 19th May 2014" and "R. González-Riestra and P.M. Rodríguez-Pascual".

Identification of useful Spectra

Fitting Gaussian function to cross-dispersion profiles

FWHM	20".26
Δ FWHM	$\pm 0".21$
PEAK	6409.27 c
Δ PEAK	± 56.20 c
CENTER	12".92
Δ PEAK	$\pm 0".09$

Statistically bad fit = discarded | except...

Identification of useful Spectra

FITTING GAUSSIAN TO
CROSS-DISPERSION PROFILE
BIRD EVENTS FILES

CALCULATING
FLUX & ASSOCIATED ERROR
BIRD SPECTRA

Defining
“minimum usability”
Parameters

$FWHM > 3\Delta FWHM$
 $FWHM \geq \text{INTRINSIC RESOLUTION}$
 $\text{INTENSITY} > 3\Delta \text{PEAK}$
POSITION ON CCD: $-100'' : 100''$
 $\text{AREA UNDER GAUSSIAN} > 3\Delta \text{AREA}$

$$\frac{\text{FLUX}}{\text{ERROR}} \frac{\sum_i F_i \Delta \lambda}{\sqrt{\sum_i \Delta F_i^2}} > 10$$

Creation of a database with all information

QUALITY classification

All useful observations
5045 (56 % of all)

QUALITY:	OBSERVATIONS	% of useful
TOP QUALITY	2421	48
LOWER QUALITY	2624	52

number of useful spectra

Criteria:	RGS1	RGS2	RGS1 or RGS1
The Gaussian parameters	2706	2332	3079
The S/N ratio	3263	4183	4347
All criteria	1796	1915	2259

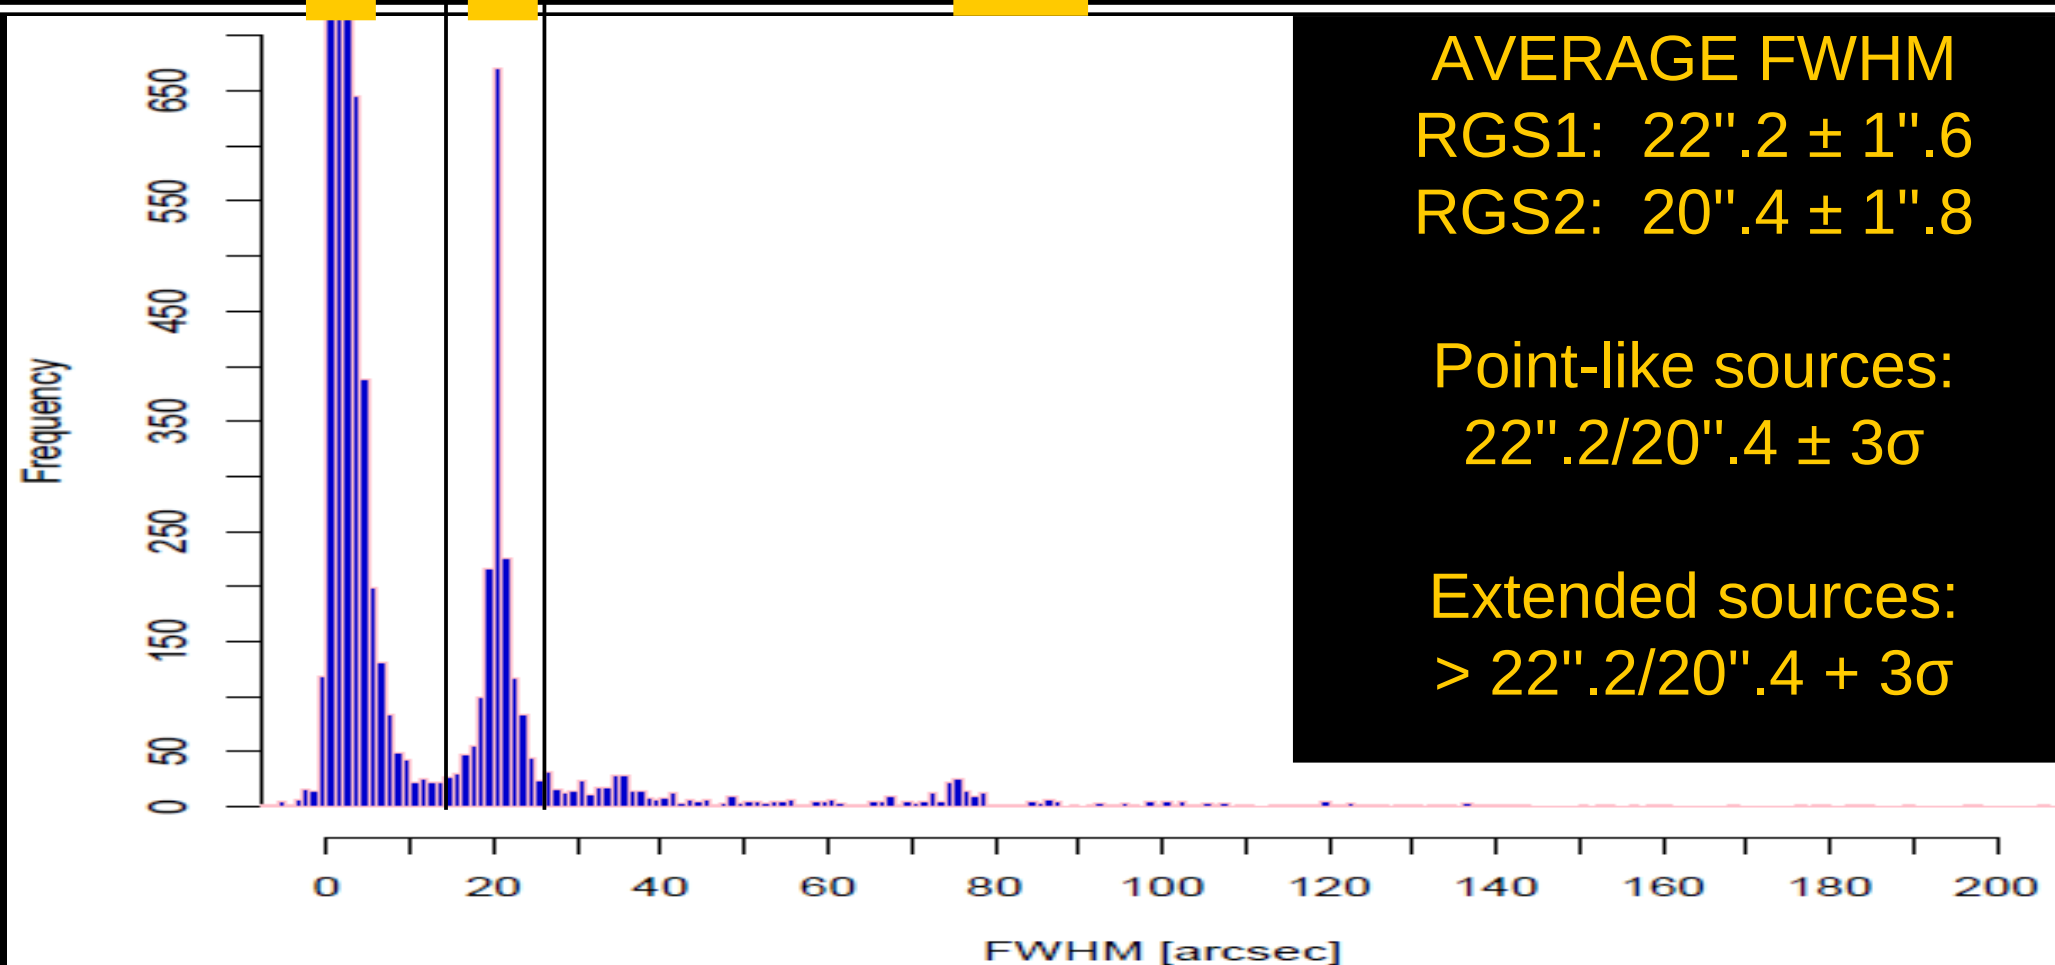

SPATIAL EXTENT classification

Distribution of the widths (FWHM) of the spatial profiles

2. Stars →
3. Groups of stars →
4. Cataclysmic Variables →
5. Supernovae and Remnants →
6. Nebulae →

Type	Top Spectra	Other Spectra	All spectra
SuperNova Remnant	Download PDF	Download PDF	Download PDF
SuperNova	Download PDF	Download PDF	Download PDF
SuperNova Remnant Candidate	N/A	Download PDF	Download PDF
All Supernovae and Remnants	Download PDF	Download PDF	Download PDF

Atlas shows:

Great potential of RGS data in archive

- + 5000 useful observations
- + 2400 very good quality

- **Some object classes show:**
similar spectral properties
(continuum shape/emission lines)
- **While at the same time some object classes show:**
great diversity in spectral properties
(continuum shape/emission lines)
- **Some object types show significant changes in:**
Spectral properties and flux
- **Some object types show:**
constant properties

What can be done in future

The interpretation of the observations in terms
of physical properties and mechanisms

For instance:

Different abundances for different objects in same class / different classes
eg. SNR with or without Fe

Different ionization eg. Fe XXIV in some objects

Intrinsic variability eg. Flare Stars

Environment eg. Absorption due to cloud crossing the line of sight in some AGNs
