

## Data rights Proposals

Proposal ID	Title	PI	Country	Category
1130035	INTEGRAL observations of Galactic X-ray bursters	Sanchez-Fernandez	Spain	Galactic Astronomy
1130036	INTEGRAL monitoring of NGC4945	Malizia	Italy	Extragalactic Astronomy
1130037	INTEGRAL observation of the newly discovered radio galaxy IGR J17488-2338	Molina	Italy	Extragalactic Astronomy
1130038	Identifying & understanding the HMXB population of the Small Magellanic Cloud	Coe	United Kingdom	Galactic Astronomy
1130039	Following the spectral evolution of NGC 2110	Beckmann	France	Extragalactic Astronomy
1130040	Measuring the high energy emission of accreting millisecond X-ray pulsars.	Ferrigno	Switzerland	Galactic Astronomy
1130041	Maintaining Study of Detailed Search for Unpredicted Gamma-ray Lines with SPI	Watanabe	USA	Nucleosynthesis and diffuse emission
1130042	The X-ray population of the Magellanic Bridge	McBride	South Africa	Galactic Astronomy
1130043	The persistent black hole candidate 1E 1740.7-2942: INTEGRAL long term monitoring searching for peculiar events	Bazzano	Italy	Galactic Astronomy
1130044	Why is Cygnus A not detected by Fermi/LAT?	Beckmann	France	Extragalactic Astronomy
1130045	The evolution of Comptonization in XTE J1701-462: from A to Z	Paizis	Italy	Galactic Astronomy
1130047	Monitoring H1743-322, Swift J174510.8-262411, and IGR J17091-3624 over a potential outburst during AO 11	Rodriguez	France	Galactic Astronomy
1130048	Unveiling the long term variations and study of outburst emission of the atoll 4U 1722-30	Tarana	Italy	Galactic Astronomy
1130049	Searching for Compton thick AGN in disk masers	Panessa	Italy	Extragalactic Astronomy
1130050	Unidentified X-ray binaries: a more in-depth study with INTEGRAL	Capitania	Italy	Galactic Astronomy
1130051	INTEGRAL monitoring of a sample of Very Faint X-ray Transients	Del Santo	Italy	Galactic Astronomy
1130052	Revealing the nature of a sample of LMXB candidate systems	Tarana	Italy	Galactic Astronomy
1130053	INTEGRAL monitoring of long X-ray bursts	Chenevez	Denmark	Galactic Astronomy
1130054	Searching for time variability and detecting new magnetars in the INTEGRAL band	den Hartog	USA	Galactic Astronomy
1130055	Following the evolution of the X-ray emitting structure with luminosity in transient accreting pulsars	Kreykenbohm	Germany	Galactic Astronomy
1130056	Searching for new outbursts from IGR J17445-2747: a new and peculiar INTEGRAL High Mass X-ray Binary	Fiocchi	Italy	Galactic Astronomy
1130057	INTEGRAL observation of faint Blazars in the field of AO-11 approved proposal ID 1120025	Nesci	Italy	Extragalactic Astronomy
1130058	Study of a dim X-ray transient in the Galactic Center field: IGR J17507-2856	Natalucci	Italy	Galactic Astronomy
1130059	Monitoring 35 of the Known Black Hole Binaries during Open Time Programs	Grinberg	Germany	Galactic Astronomy
1130061	Probing the accretion regime at lower luminosities: the case of GX 304-1	Klochkov	Germany	Galactic Astronomy
1130062	INTEGRAL Monitoring of 4U1954+319 and GX 1+4	Wilms	Germany	Galactic Astronomy
1130063	Catching Magnetars' Bursts with INTEGRAL on the Fly	Gotz	France	Galactic Astronomy
1130065	Hard X-ray emission of Cataclysmic Variables	Landi	Italy	Galactic Astronomy

Note: A detailed list with the allocation of sources to observers associated to the observing proposals will be available at the ISOC Website
