

European Astronomical Society Meeting

Guido De Marchi

Head Scientist

ESA Science Data Centre

- Scheduled on Monday 29 June, 13:00 – 14:30
- Goals:
 - Update on Astronomy Archives
 - AAUG activities
 - ESASky demo
- Good attendance last year in Lyon (~35 people)

- Message circulated to all session chairs on 6 April, little details so far
- "We will inform you how we plan to organise a virtual meeting by email and on the EAS 2020 website as soon as possible"
- "We are contracting to use a single, professional virtual platform that presents the plenaries, symposia and special sessions in a regular meeting style."
- "We offer the possibility to pre-record your presentation in case of connectivity issues and also if you do not feel comfortable with live sessions."

- We signed up for a virtual session, but will see how it develops
- Incentive for us to host professional webinars (good for future activities)
- ESASky demo should do fine through virtual seminar (people can try out on their computers/phones)
- We will miss interactive ESASky sessions and networking at ESA booth
- Worth mentioning plans for the ARVP?
