

Jet Propulsion Laboratory Open House 19th & 20th May 2007

Presentation Material for the Ulysses Booth

> Ulysses Flight Control Team European Space Agency 4800 Oak Grove Drive MS 264-114 Pasadena, CA 91109 ulsfct@jpl.nasa.gov

The Ulysses Mission – Over the Sun's Poles JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Outline of Presentation

- Ulysses mission overview & history
- The unique orbit of Ulysses
- Ground stations used by Ulysses
- The Ulysses spacecraft
- Ulysses science payload
- Some Ulysses science results
- Web sites
- Spacecraft sub-systems block diagrams
- Questions and answers

Mission Overview

- Joint ESA-NASA mission
 - "… to make the first-ever measurements of the unexplored region of space above the Sun's poles."
 - Launched on 6th October 1990
 - Delayed 4 years due to Challenger accident
 - Mission extended until March 2008
 - Completion of 3rd set of solar polar passes
 - Second set of solar minimum observations

The Ulysses Mission – Over the Sun's Poles JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

International Cooperation

- ESA ~50% contribution:
 - Spacecraft design and construction
 - ~50% of science payload
 - Integration of science payloads to spacecraft
 - Flight control team at JPL
- NASA ~50% contribution
 - Launch
 - Radioisotope Thermoelectric Generator (RTG) power source
 - ~50% of science payload
 - Use of Deep Space Network (DSN) ground stations
 - Ground operations, navigation, data management teams
 - Facilities for ESA flight control team at JPL

Mission Development History

Year	Event	Year	Event
1959	Over-flight of solar poles first proposed.	1984	<i>Ulysses</i> launch postponed to 1986.
1974	ESA/NASA joint mission study - mission named <i>Out of Ecliptic</i> (OOE).	1985	Spacecraft removed from storage for reintegration and recertification for launch in
1977 <i>Out of Ecliptic</i> project approved - launch			May 1986.
	set for 1983.	Jan 1986	Challenger accident.
1978	Construction of ESA OOE spacecraft		Ulysses launch campaign at Kennedy Space Center (KSC) halted.
1979	Name changed to <i>International Solar Polar</i> <i>Mission</i> (ISPM).	mid 1986	Spacecraft shipped back to Europe for storage.
1980	ISPM launch postpone <mark>d to 1985 due to space shuttle development problems.</mark>	mid 1989	Spacecraft removed from storage for second round of reintegration and launch
1981	NASA ISPM spacecraft cancelled -		
	numerous science instrum <mark>ents lost.</mark>		Spacecraft shipped to KSC for launch
1983	ESA ISPM spacecraft completed and put in storage till 1985.	1990	campaign. ESA engineering team relocated to KSC.
	Mission renamed <i>Ulysses.</i>		ESA operations team relocated to JPL.

Mission Milestones

Date	Event		Date	Event
6 Oct 1990	Launch		<mark>31 Aug</mark> 2001	Start of 2 nd north polar pass
8 Feb 1992	Jupiter Closest approach (6.3 Rj)		13 Oct 2001	Maximum north solar latitude (+80.2°)
26 Jun 1994	Start of 1 st south polar pass		10 Dec 2001	End of 2 nd north polar pass
13 Sep 1994	Maximum south <mark>solar latitude</mark> (-80.2°)		4 Feb 2004	Jupiter Distant Encounter (1684 Rj)
5 Nov 1994	End of 1 st south polar pass	1	17 Nov 2006	Start of 3 rd south polar pass
19 Jun 1995	Start of 1 st no <mark>rth polar pass</mark>	•	7 Feb 2007	Maximum south solar latitude (-79.7°)
31 Jul 1995	Maximum nor <mark>th solar latitude</mark> (+80.2°)		3 Apr 2007	End of 3 rd south polar pass
29 Sep 1995	End of 1 st north polar pass		30 Nov 2007	Start of 3 rd north polar pass
6 Sep 2000	Start of 2 nd south polar pass		14 Jan 2008	Maximum north solar latitude (+79.8°)
27 Nov 2000	Maximum south solar la <mark>titude</mark> (-80.2°)		15 Mar 2008	End of 3 rd north polar pass
16 Jan 2001	End of 2 nd south polar pass		31 Mar 2008	Planned end of mission operations

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Mission Operations Team

- Joint ESA-NASA mission operations team located at the Jet Propulsion Laboratory
 - ESA
 - Flight control team
 - Mission operations manager (1)
 - Spacecraft operations manager (1)
 - Spacecraft systems engineers (3)
 - Spacecraft analysts (3)
 - Flight dynamics engineer (1)
 - Software support engineer (1)
 - Scheduler (1)
 - NASA/JPL
 - Ground operations team (4)
 - Navigation team (0.25)
 - Data management team (1)

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Launch

- Launch
 - 6th October 1990
 - On-board space shuttle
 Discovery to low Earth orbit
 - 2 solid rocket motor upper stages inserted Ulysses into outbound trajectory for Jupiter
 - Inertial Upper Stage (IUS)
 - Payload Assist Module (PAM-S)
 - Earth departure velocity 15.3kms⁻¹ (only superseded by New Horizons, 16kms⁻¹, in Jan 2006)

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Jupiter Gravity Assist

- Gravity assist at Jupiter
 - Orbital plane rotated from in-ecliptic to over the Sun's poles
 - Ecliptic relative inclination changed from 2.3 to 85.1°
 - Perihelion distance raised from 1.0 to 1.4 AU
 - Ulysses was never closer to the Sun than on launch day!
- Jupiter closest approach
 - 8th February 1992 06:00:34 UTC
 - Jovicentric distance 408,894 km (6.3 Rj)
- Data from fly-by improved knowledge of Jupiter's position

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

1st Solar Orbit

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

2nd Solar Orbit

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

3rd Solar Orbit

The Ulysses Mission – Over the Sun's Poles JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Orbit Characteristics 1

- Polar Heliocentric Orbit
 - From <u>http://ssd.jpl.nasa.gov/?horizons</u>
 - Earth Mean Equator 1950 reference frame (B1950, EME50)
 - Heliocentric data for 20-May-2007 00:00:00 UT

 Semi-major axis: 	508742655 km (3.39 AU)		
Eccentricity:	0.590		
Inclination:	100.333°		
 Argument of perihelion: 	350.306°		
 Longitude of ascending node: 	337.469°		
True anomaly:	300.696°		
Mean anomaly:	345.820°		
Period:	2,292 days (6.275 years)		
 Perihelion radius: 	208,387,806 km (1.389 AU)		
 Aphelion radius: 	809,535,548 km (5.397 AU)		
 Heliocentric range: 	254,683,277 km (1.698 AU)		

The Ulysses Mission – Over the Sun's Poles JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Orbit Characteristics 2

• Distance to Earth (20-May-2007 00:00 UTC)

- 284,948,700 km (1.905 AU)

- one-way light time 15m50s
- Earth closest approach
 - 26th Augu<mark>st 2007</mark>
 - approx 62,200 km (0.42 AU)
- Mars closest approach
 - 20th July 2007
 - approx 133,700 km (0.89 AU)

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Ground Stations 1

- NASA Deep Space Network for routine support (26m, 34m & 70m antennas)
 - Goldstone (near Barstow, CA), USA
 - Madrid, Spain
 - Canberra, Australia*
- Ground stations for non-routine support
 - ESA Kourou, French Guiana (15m)*
 - ESA New Norcia, Australia (35m)*
 - DLR (German space agency) Welheim, Germany (30m)
 - Univ of Chile, Santiago station (9m, uplink only)
 - Parkes, Australia (as seen in movie "The Dish") (64m)

* in use this weekend

The Ulysses Mission – Over the Sun's Poles JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Ground Stations 2

Goldstone 70m antenna – DSS14

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Ground Stations 3

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Spacecraft 1

- Dimensions
 - Length 3.2 m (booms stowed)
 - Width 3.3 m
 - Height 2.1 m
- Mass
 - Total at launch 366.7 kg
 - Scientific payload 55.1 kg
 - Payload cover ejected 0.1 kg
 - Fuel (hydrazine N₂H₄) for attitude control
 - Beginning of mission 33.5 kg
 - May 2007 ~6.7 kg
- Power
 - Radioisotope Thermoelectric Generator (RTG)
 - Beginning of mission 283 W
 - May 2007 ~195 W

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Spacecraft 3

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Science Payload 1

Acronym	Instrument				
COSPIN	Cosmic rays and solar particles				
DUST	Cosmic dust				
EPAC/GAS	Energetic par <mark>ticles and interstellar neutral gas</mark>				
GRB	Solar X-rays and cosmic gamma-ray bursts				
HI-SCALE	Low-energ <mark>y ions and electrons</mark>				
SWICS	Solar wind i <mark>on</mark> composition				
SWOOPS	Solar wind plasma				
VHM/FGM	Magnetic field				
URAP	Radio and plasma waves				

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Science Payload 2

The Ulysses Mission – Over the Sun's Poles JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Science - Major Achievements

- First detailed measurements of the solar wind from the Sun's polar regions at solar minimum and solar maximum.
- Discovered that the magnetic flux leaving the Sun is the same at all latitudes.

- Discovery of energetic particle "reservoirs" surrounding the Sun.
- Discovery of interstellar dust in the Solar System.
- First direct measurements of interstellar helium atoms in the solar system.

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Science - Ulysses & the Solar Cycle

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Science - Space Weather Data

- 2D data insufficient for practical space weather forecasting models
 - SOHO (@L1 since Apr 1996)
 - ACE (@L1 since Dec 1997)
 - STEREO ("ahead" & "behind" Earth, since Apr 2006)
 - SDO (geosync, launch Apr 2008)
 - numerous Earth orbiters
- Ulysses adds 3D data coverage
 - solar-polar since Feb 1992
 - Sun range from 1.3 to 5.4 AU

http://www.agu.org/journals/sw/swa/free/newarticle/print.php?id=2005SW000195

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Science - Comet Tail Encounter

In 1998, three **Ulysses science** teams discovered evidence that Ulysses had passed through the tail of comet Hyakutake in 1996! Tail length calculated to be 3.8 AU - longest comet tail ever recorded.

http://www.sp.ph.ic.ac.uk/Ulysses/comet/

JPL Open House, Ulysses Booth Presentation, 19th & 20th May 2007

Science - Another Comet Tail!

In Oct 2000, a Coronal Mass Ejection (CME) moving away from the Sun enveloped both the comet and the spacecraft, carrying the cometary material to Ulysses.
