PANGAEA: Planetary Analog Geological and Astrobiological Exercise for Astronauts

Geological field training: traverses w/ real scientific objectives in real Planetary Analogue geologic environments

PANGAEA-eXtension

Space analogue test campaigns, following a session of PANGAEA training, involving astronauts, planetary scientists, trainers, operations personnel and space engineers in a real planetary analogue setting, testing:

- Science
- Technology
- Operations

- ✓ Not a simulation: real science traverses
- ✓ Multiple space-related partners simultaneously involved in field training
- ✓ Cooperation between:

NASA ARTEMIS III Science Definition Team Report

- **6.1.4-1** Astronauts should participate in an Apollo-style **course in geology and planetary science**.
- **6.1.4-2** Astronauts should be trained and equipped to **collect a variety of surface/sub-surface samples**.
- **6.1.4-3** We recommend a mission capability of **real-time transmission of data from in situ science instrumentation** that provides **documentation for site characteristics** and enables a science support team (backroom, operations center, etc.) to **support EVA operations with (near) real-time feedback** to the crew when necessary on science decision-making, as well as **provide processed data when necessary** (i.e. helping convert raw data into tactical decision-making).

FIELD SEGMENT

→ DISTRIBUTED SCIENCE OPERATIONS

Situational awareness and data sharing amongst crew members in the field and the extended support teams is crucially important for successful planetary exploration [1].

[1] NASA ARTEMIS III Science Definition Team Report [\(link\)](#)

- All relevant information must be retrieved, collected and stored in real time in a structured way
- Interaction with portable instruments must be easy, enabling cooperative science operations
- Multimedia information sharing is bidirectional, field to ground to field

QUICK INSIGHT FROM
MINERALOGICAL DATABASE

REFERENCE & GUIDED CLASSIFICATION PROCESSES

→ Ground monitoring and remote support

Ground Sci/Ops rooms can

- receive data in near real time
- give feedback on operations
- manipulate data and add details

→ Information is then **synced back to the crew**

PINPOINTED INFORMATION (2D & 3D)

The 2D map interface shows a mission track with several data points. A tooltip for 'SC_2' displays the following information: UTC 23:29:33, TRV 20:00:00, ETA 25 days ago, EVA 5 hours ago, and LVL 16 1.8 K. The 3D map interface shows a topographic view of the terrain with a mission track and a tooltip for 'UTC 08:51:25', 'TRV 20:00:00', 'ETA 25 days ago', and 'HGT 2 km'.

→ SUMMARY

The ESA Electronic Field Book Tool Suite for Geological Planetary Operations will allow to:

- ✓ Maximize **sampling efficiency** through real-time in-situ characterization and selection of the most promising sample, reducing duplicates and **identifying** out of context cases (Analytical Tools, MDB, ML)
- ✓ **Document** the operations and science objectives with a **multi-scale** and multi-spectral approach (imaging devices, pan-cam)
- ✓ Keep a **continuous flow of data** and a simultaneous data acquisition and interpretation between crew and science backroom (EFB)
