

Science Operations of ESO's La Silla Paranal Observatory: the back-end segment

Martino Romaniello

Head, Back-end Operations Department

ESO HQ - Garching bei München

(very kindly) presented by Magda Arnaboldi

The ESO Data Flow System

- The science operations of the La Silla Paranal Observatory are embedded in an end-to-end data flow system that encompasses the entire lifecycle of scientific data
 - From the preparation of observing proposals to telescope scheduling, from the detailed definition of observing strategies to their execution at the telescope, from data processing to archival exploitation of the data
- The goal is to deliver science data to users specs and feed the Science Archive Facility
- It is one of the pillars of the success of the VLT
- Engraved in the “VLT/MLTI Science Operations Policy” document by the ESO Council

The ESO back-end in a nutshell

- The back-end of the VLT Data Flow System begins when the data acquisition at the telescope ends
 - Data Transfer System
 - Data Processing
 - Quality Control
 - Science Archive Facility (SAF)
 - Data delivery to PIs, enable novel archive science
- Combination of operations and development
- Identify and exploit the similarities and synergies among the different activities and services
 - Reuse of concepts and bits and pieces of infrastructure in different context: cost effective and facilitates uniformity

From Chile to Garching in minutes: the Data Transfer System

The Data Transfer System

- Online transfer of data from the La Silla Paranal Observatory
 - Overflow system based on physical media (USB disks)
 - Configurable transfer priorities
 - About 200 GB (compressed) a day
- Typical transfer times
 - La Silla and Paranal (since April 2012): 50% of the files available for download within 30 minutes of acquisition, 90% within 3.5 hours, 99% within 8 hours
 - APEX (since April 2013): 100% of the data in 48 hours
- Allows to build operational and user services
 - Closed Quality Control loop
 - Quasi real-time user access to time critical data (e.g. Targets of Opportunity, ...)
 - ...

Data processing

Data processing: the context

- ESO aims at supporting the production of science data products for all of its instruments
 - Immediate exploitation by the respective PIs
 - Re-use of the same data by the community at large through the ESO Science Archive Facility
- In support of the generation of data products, ESO enforces calibration plans for all the instruments and ensures that the instruments perform nominally
- ESO develops and exports data reduction tools for all of VLT/MLTI instruments to facilitate the exploitation of the data
 - Instrument specific algorithms
 - User oriented environment to execute and interact with the data reduction modules

User science data processing: Reflex

User science processing: Reflex

User science processing: Reflex

- Reflex is an environment that allows an easy and flexible way to execute VLT/I data reduction modules
 - Collection of scientific workflows executed by the Kepler workflow engine
 - A workflow is a graphical representation of the data reduction chain that allows for easy visualization, documentation and control of the execution
- In addition to the native Kepler modules (maths, logic, workflow control, I/O, etc.), Reflex workflows are based on customized ones for specific functionalities
 - Fully automatic data organization (full calibration cascade supported)
 - Support for multi OB processing
 - Conditional branches, loops and conditional stops
 - Interfaces to Python (hence IRAF and MIDAS) and IDL
- ESO releases fully functional workflows. Sources of workflows:
 - ESO, in kind contributions, 2nd generation instrument consortia, users (?)
 - Strategy: mixture of fully scientific validated and interactive workflows (UVES, X-Shooter, KMOS) and simpler ones to speed-up data organization and basic reduction (VIMOS spectroscopy, FORS2 MXU)
- More at this conference
 - Posters: Bramich (#5)

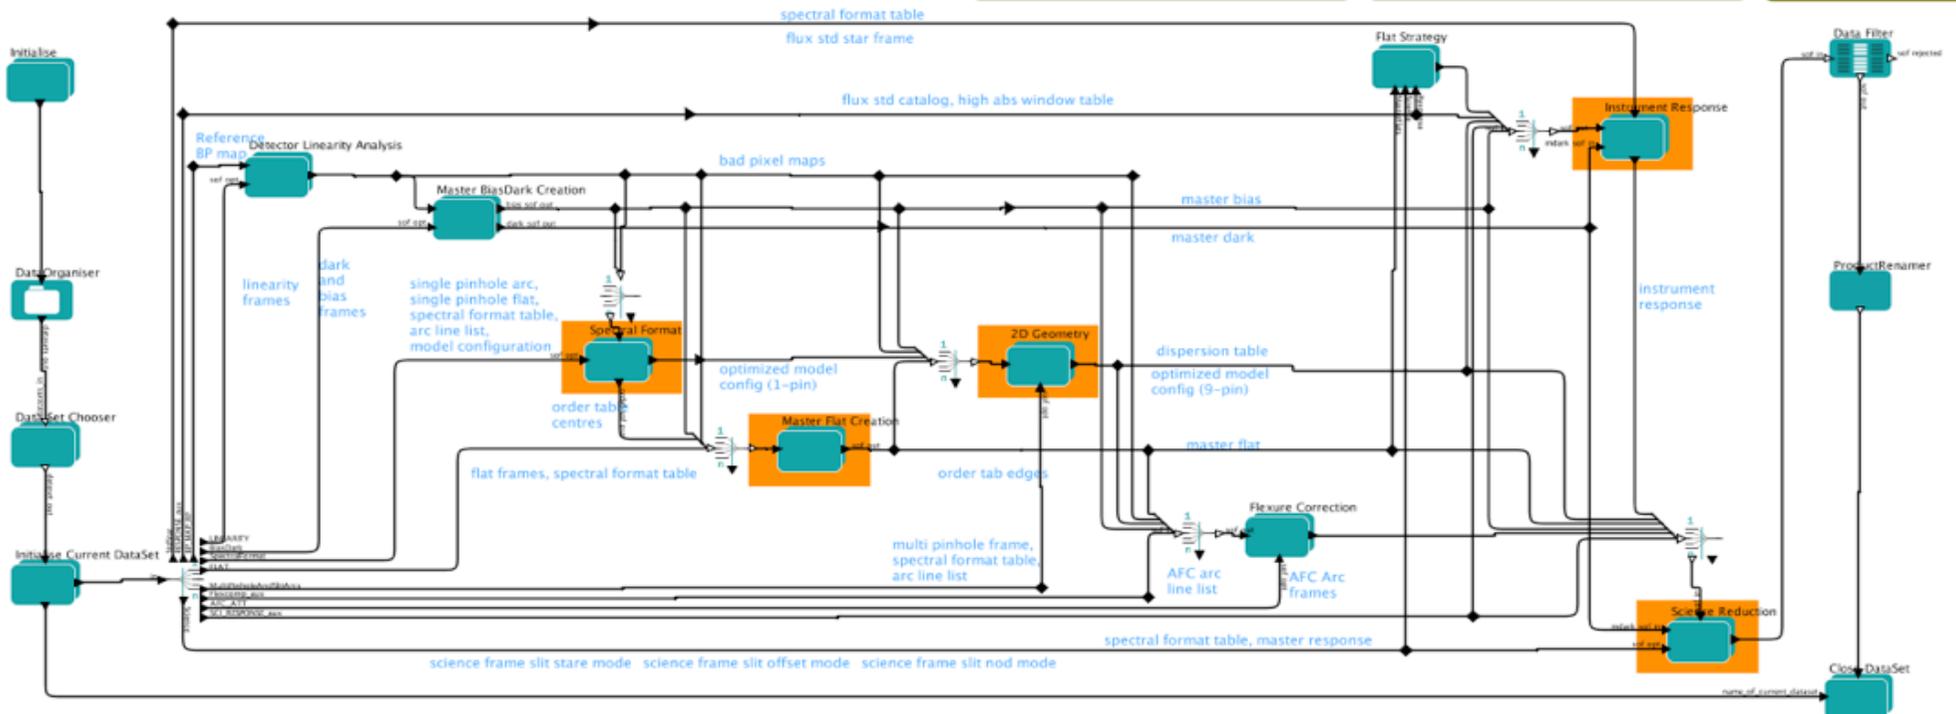

User science processing: Reflex

X-shooter Workflow for Physical Mode Slit Data Reduction (v. 2.2.0)

Workflow Instructions	Setup Directories	Global Parameters
<p>To run this workflow on the demo data:</p> <ul style="list-style-type: none"> Turn on highlighting. Choose "Tools" -> "Animate at Runtime" from top menu and set it to "1". Press the "Run" button OR cntrl-R to start the workflow. <p>To run on a different data set:</p> <ul style="list-style-type: none"> Click on ROOT_DATA_DIR and set as appropriate. All subdirectories of RAWDATA_DIR will be searched for data. If desired, change END_PRODUCTS_DIR. Press the "Run" button OR cntrl-R to start the workflow. <p>To monitor the progress of the workflow in more detail:</p> <ul style="list-style-type: none"> Open "Window" -> "Runtime Window" in top menu before starting the workflow. <p>The X-shooter workflow tutorial and demo data and the pipeline user manual can be found here: http://www.eso.org/sci/software/pipelines/#reflex_workflows</p>	<p>Input:</p> <ul style="list-style-type: none"> ROOT_DATA_DIR: /Users/mromanie/Reflex/Kepler/RELEASES/v2.4/data_wkf RAWDATA_DIR: \$ROOT_DATA_DIR/reflex_input/Xshooter CALIB_DATA_DIR: /Users/mromanie/Reflex/Kepler/RELEASES/v2.4/install/calib/xsh-2.2.0 <p>Working Directories:</p> <ul style="list-style-type: none"> BOOKKEEPING_DIR: \$ROOT_DATA_DIR/reflex_book_keeping/Xshooter LOGS_DIR: \$ROOT_DATA_DIR/reflex_logs/Xshooter TMP_PRODUCTS_DIR: \$ROOT_DATA_DIR/reflex_tmp_products/Xshooter <p>Output:</p> <ul style="list-style-type: none"> END_PRODUCTS_DIR: \$ROOT_DATA_DIR/reflex_end_products 	<ul style="list-style-type: none"> RecipeFailureMode: Ask EraseDirs: false FITS_VIEWER: fv <p>Global parameter for the behaviour when a recipe fails. 'Ask' means that each time a recipe fails, the choice to continue or stop will be presented. 'Continue' means that the workflow will ignore errors and continue, 'Stop' means it will stop.</p> <p>Change "EraseDirs" to true to erase BOOKKEEPING_DIR, TMP_PRODUCTS_DIR and LOGS_DIR each time the workflow is run (Lazy Mode will not work anymore)</p> <p>fits viewer to use for the inspection of input/output products</p>

User science processing: Reflex

X-shooter Workflow for Physical Mode Slit Data Reduction (v. 2.2.0)

Workflow Instructions **Setup Directories** **Global Parameters** = actor with interactive option

To run this workflow on the demo data:

- Turn on highlighting. Choose "Tools" from top menu and set it to "1".
- Press the "Run" button OR ctrl-R to

To run on a different data set:

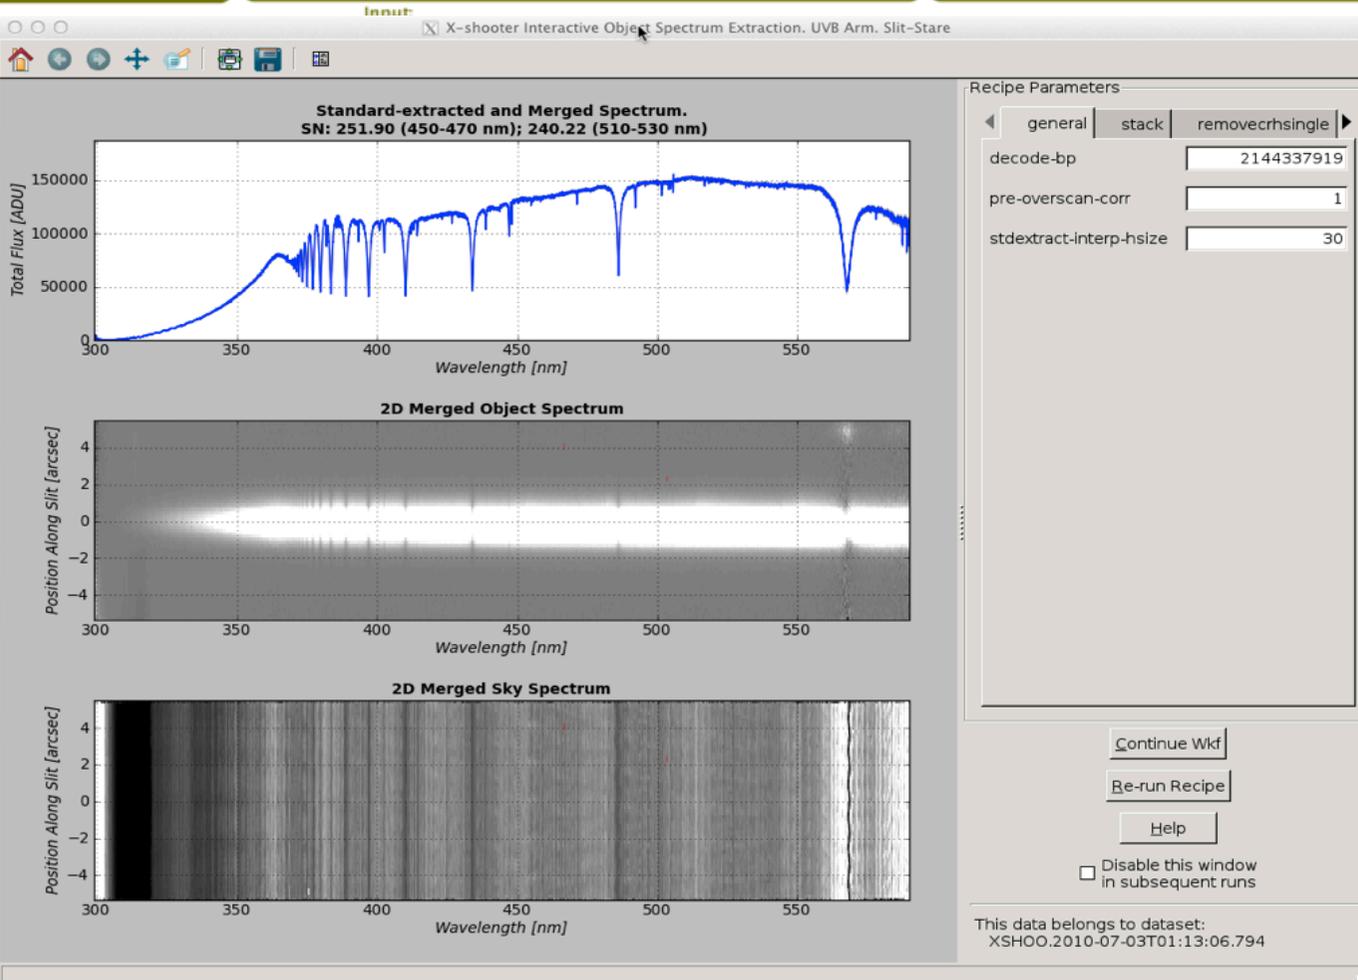

- Click on ROOT_DATA_DIR and set as All subdirectories of RAWDATA_DIR w
- If desired, change END_PRODUCTS_DI
- Press the "Run" button OR ctrl-R to

To monitor the progress of the workflow:

- Open "Window" -> "Runtime Window" starting the workflow.

The X-shooter workflow tutorial and dem http://www.eso.org/sci/software/pipeline

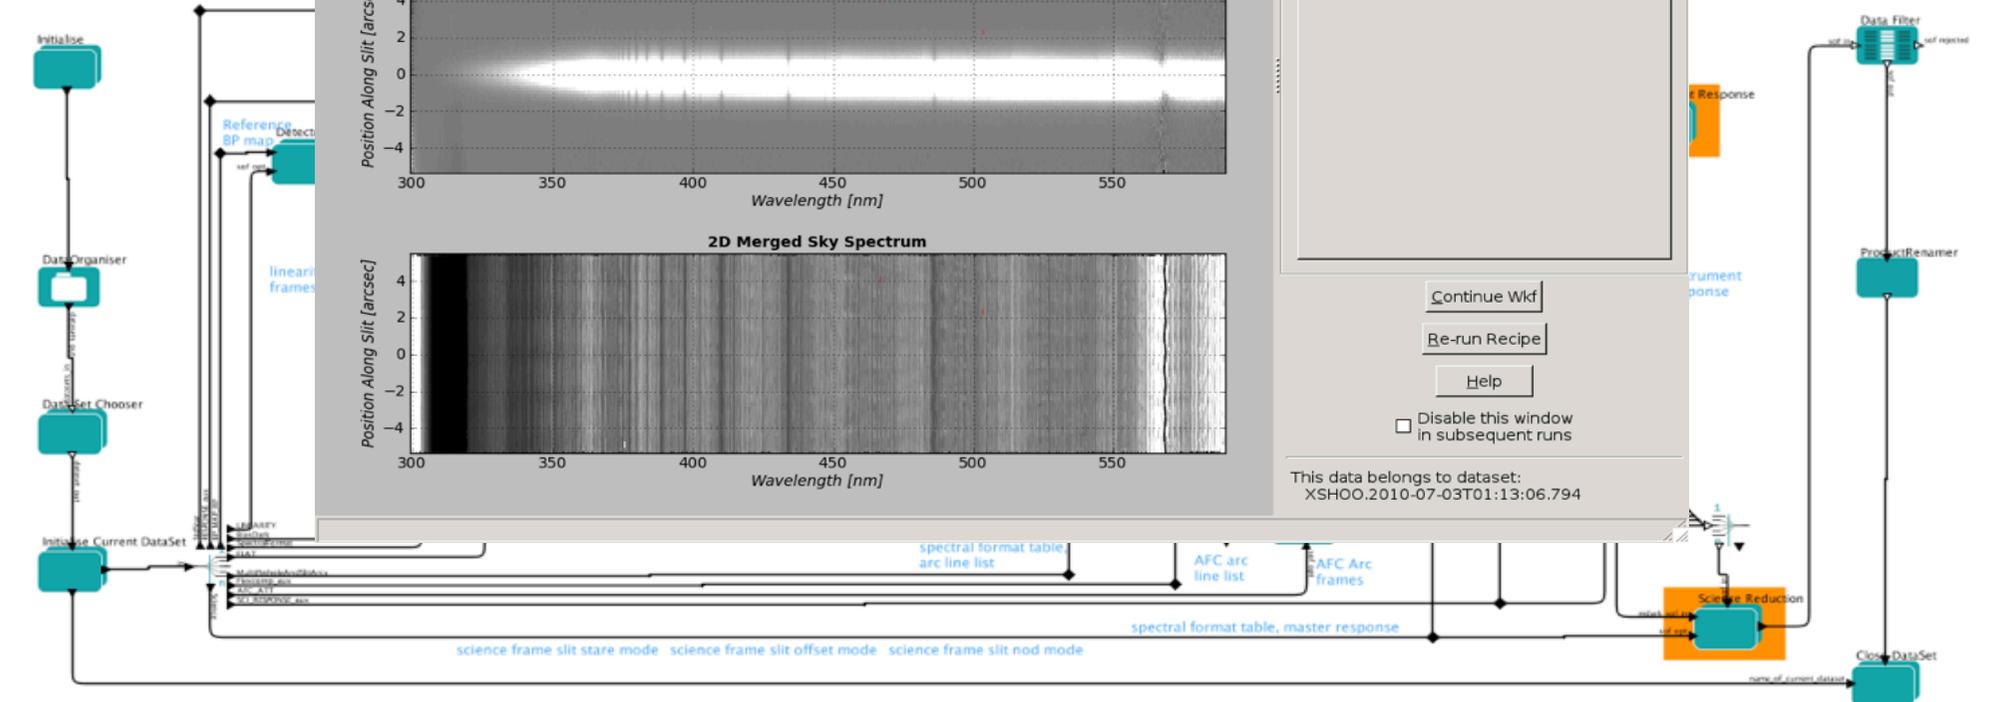

Step 1: Data Organisation and Selection

When a recipe fails, the choice to 'Continue' means that the workflow will continue, 'Stop' means the workflow will stop.

Use the 'Data Filter' and 'LogS_DIR' (Lazy Mode will not work anymore)

Step 5: Output Organisation

Pipeline development in 2013

Instrument health, data completeness and quality: the Quality Control loop

The Quality Control loop

The Quality Control loop

- Quality Control loop with Paranal closed in minutes
- Data is transferred online to Garching, automatically processed and analyzed
 - Calibration completeness, instrument health indicators extracted from dedicated calibrations and trended
- The results fed back to Paranal for follow up
 - Follow up as shared process
 - Information on demand to highlight only critical situations

The Quality Control loop

CAL FORS2 calChecker: calibration completeness monitor

Last update: 2013-04-18T12:57:18 (UT) [0d 00h:07m ago] ✓ [?] Paranal date*: 2013-04-17 [?] server: www.eso.org HQ [HELP] [ASSOC-RULES] [DETAILS]

CAL FORS2 calChecker: Calibration report for all science files, date 2013-04-17

◀ ▶ [close window](#) | [setup table](#) | [search full table](#)

- This is the detailed calChecker report about the calibrations for all science OBs for the indicated date.
 - All science data with PROG_ID starting with 60. or 060. are ignored.
 - This report flags calibrations that are formally missing (marked in yellow or red). In exceptional cases, this formal result may be overridden by the analysis of the QC scientist (as indicated in the ANALYSIS notes). Then this analysis result, as displayed on the main calChecker interface, is the final word.

- OB comments are truncated after 40 characters. Point your mouse on the comment field to read the full comment, or check the nightlog ('NLT').
 - Multiple comments for the same OB in the same night are all displayed, separated by '!'.
 - The table can be sorted and filtered.
 - Press Shift key for multiple column sorting (default is DATA_TYPE, SETUP and RAW_FILE).

[bottom](#) | [report](#) | [NLT](#)

 - Posters: Dobrzycka (#8)

The ESO Science Archive Facility (SAF)

Data access through the SAF

- The Science Archive Facility is now **the** access point to ESO data
 - Online self service (w/ CalSelector) vs media pushed to users
 - Media at the Observatories discontinued
 - Time critical data access: Target of Opportunity/Rapid Response Mode, pre-imaging, transients, planets, ...
 - Proprietary access to PIs and delegates
 - Subscription service to notify users of observation execution
 - (Limited) programmatic access

<http://archive.eso.org>

Data access through the SAF

To browse the archive

Currently, **raw data** and various types of **data products** can be reached via different interfaces:

Category	Query Forms	Data collection	Data Type	Instruments

CalSelector

CalSelector

- Archive service to associate to raw science files all the raw and static calibrations needed for processing, plus ancillary files (e.g. acquisition frames), night log excerpts and a description of the association itself (xml format)
 - Designed to reproduce the Calibration Plans and work with Reflex
- v1.0 deployed in November 2011
- Complete coverage from 2009, effort to extend as far back as possible
 - The look-back time will likely depend on instrument and mode
- <http://www.eso.org/sci/archive/calselectorInfo.html>

Data products & the Archive

- ESO's high level strategy
 - Advanced Data Products from the community
 - Phase 3
 - Public Surveys, Large Programmes, et al.
 - Science Grade Data Products generated in-house
 - Service and Visitor Mode
 - The data products and tools are evolving to support this
 - Data products through the Science Archive Facility
 - The archive services are evolving to support this

Internal Data Products

- Science grade data products generated in-house by running the corresponding instrument pipelines
 - Driven by data, rather than by a specific science goal
 - Uniform processing with a standard set of processing parameters
- Seamless archive experience with External Data Products, e.g. from Public Surveys
 - Full integration in the Science Archive Facility
- Timeline
 - Publication of UVES Echelle data in Q4 2013 (backlog+stream of new data)
 - Then (*preliminary*): X-Shooter-Echelle, FLAMES-MEDUSA, and HAWK-I and VIMOS imaging (UK in-kind contribution), KMOS, MUSE
- More at this conference
 - Talks: Retzlaff (Friday at 11:40)
 - Posters: Hanuschik (#11)

External Data Products (Phase 3)

- Phase 3 – PIs of ESO observing programmes return data products to ESO
 - Storage in the ESO Archive
 - Publication to the scientific community
- ESO's policies governing Phase 3 are specific to the type of observing programme
- Phase 3 is mandatory for ESO Public Surveys and for ESO Large Programmes since period 75; available also for other ESO observations
- Further allocation of telescope time for Public Surveys is conditional to the submission of data products via Phase 3
- More at this conference
 - Talks: Arnaboldi (Friday at 9:50) and Retzlaff (Friday at 11:40)
 - Posters: Micol (#19), Delmotte (#20), Retzlaff (#26)

The Archive as Science Resource

- Refereed publications from ESO facilities
