Astro-WISE information system– fully datacentric

All data beyond pixel data is Metadata

all pixel data \leftrightarrow data servers

all Metadata \leftrightarrow database

compute clusters / GRIDs all I/O to db

- all components scalable
- all components EU distributed

AstroWise -> Wise

- 64 bit identifier
- Terabytes of pointers
- Extreme datalineage ++
- Modeling dependencies
- Distributed

Experimental Astronomy
Volume 35 januari 2013
Topical issue on AstroWise
19 papers 389 pages

Central role db

- All I/O via db ; metadata; sources
- Objects persistent in db
- data server access via global filename (key) in db
- Security
- (parallel)processing
- Webservers
- Synchronized real time National Nodes

VST - Virtual Survey Telescope

Paris

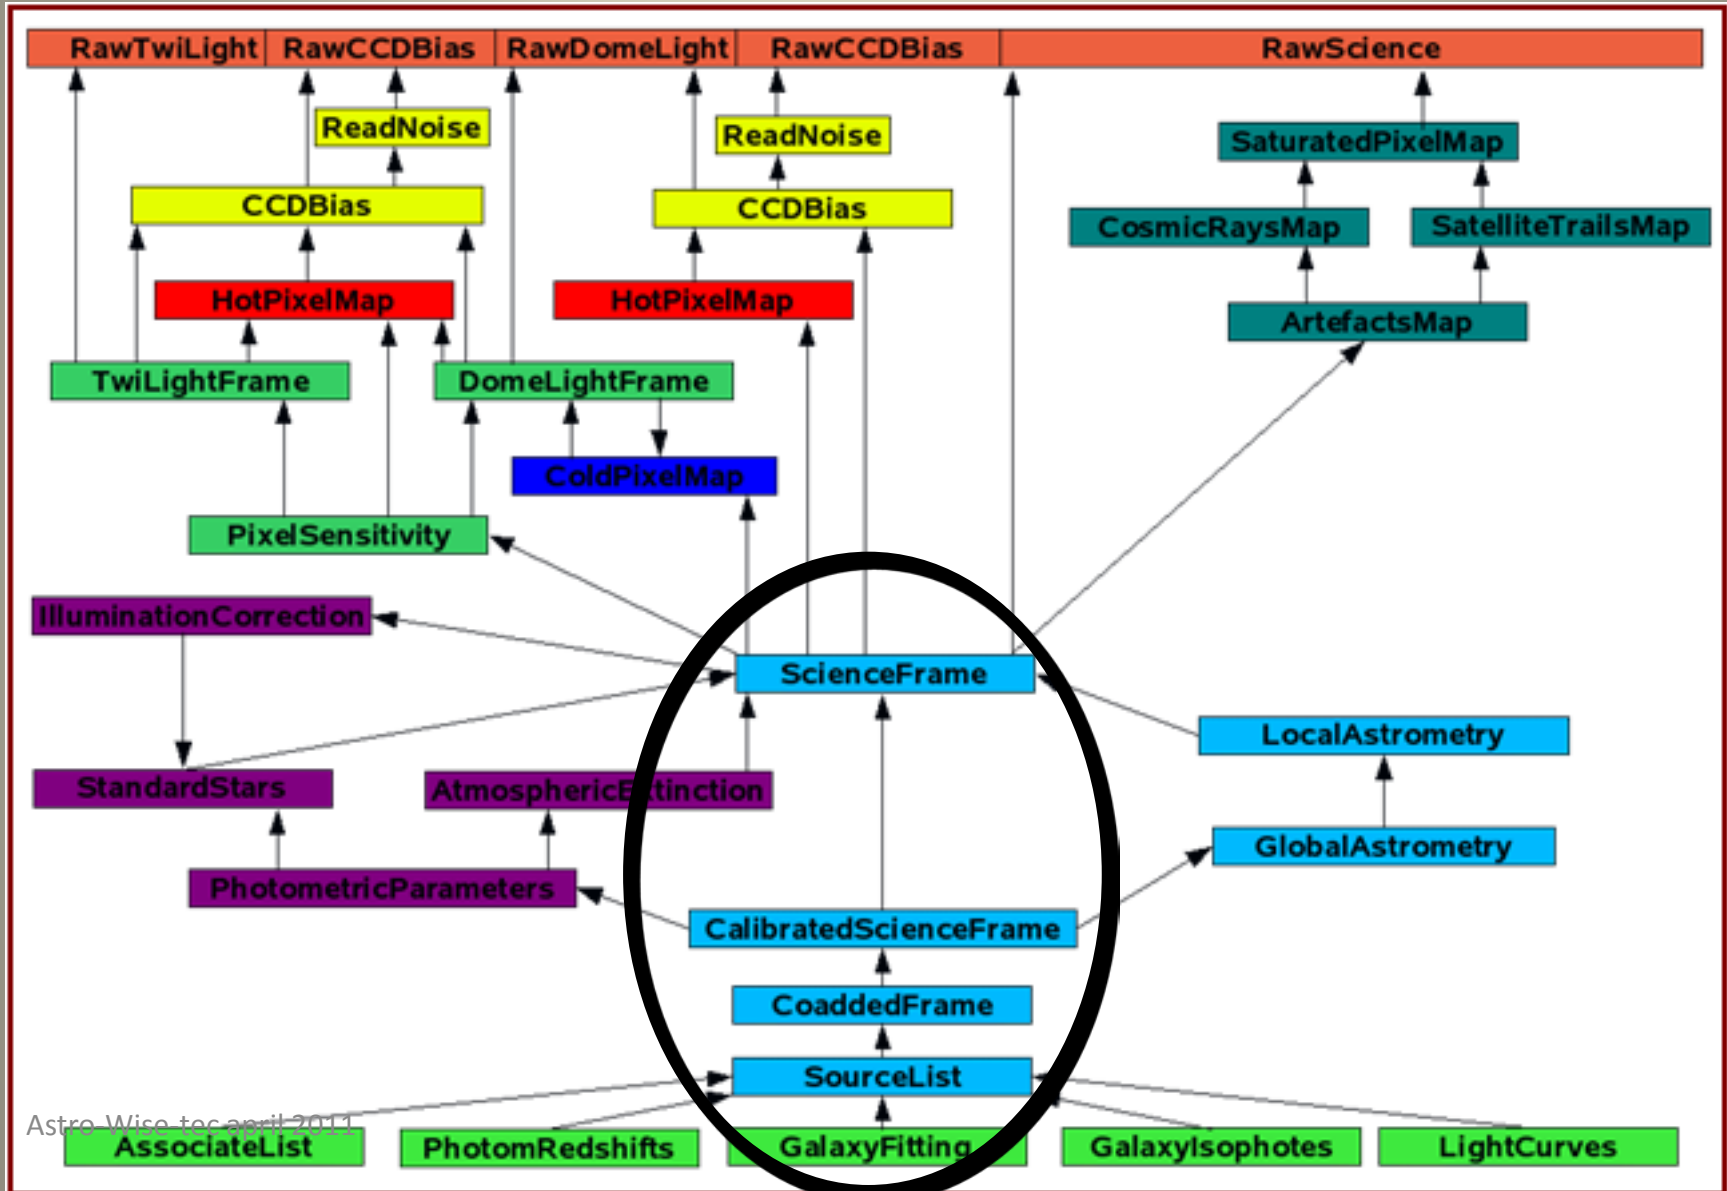

FileServer Server (Python)

Oracle Server

TARGET diagram

Target processing: ++ the make metaphor

```
awe> targethot=HotPixelMap.get(date='2003-02-14', chip='A5382')
```

The processing chain is

ReadNoise <-- Bias <-- HotPixels

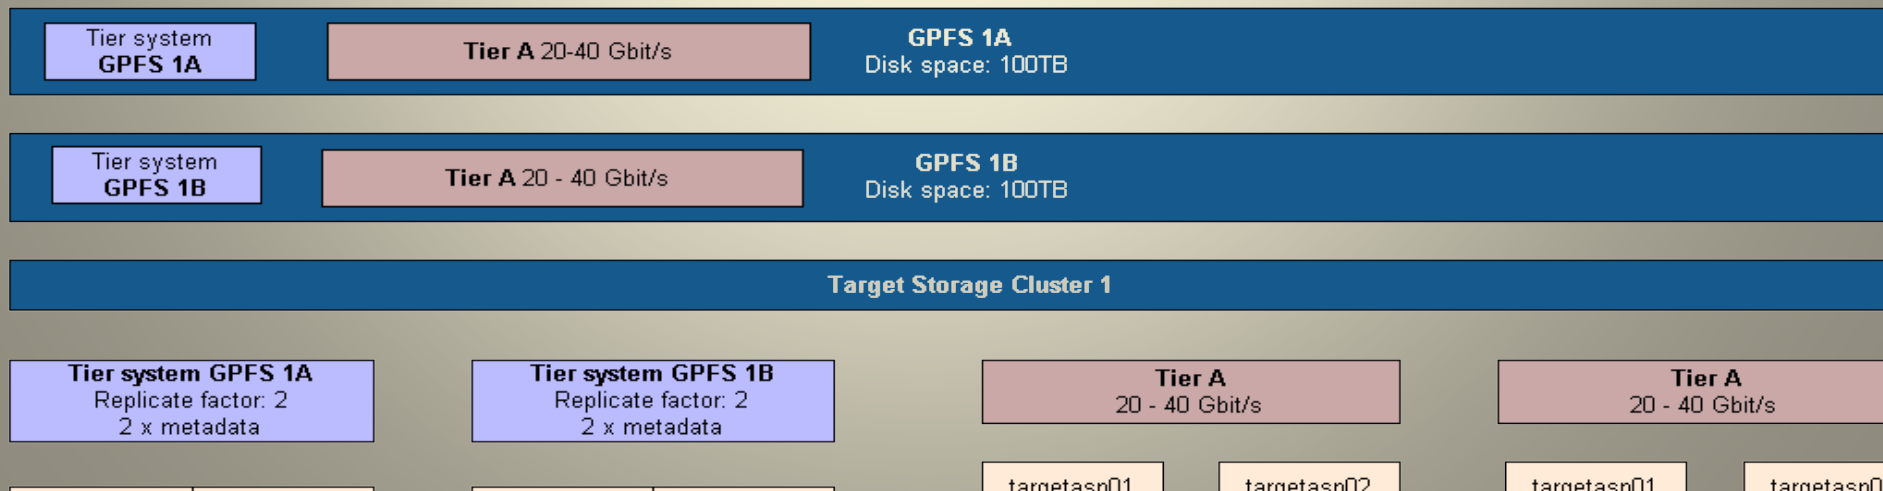

- > class HotPixelMap(ProcessTarget):
- >> def self.make()

- > class ProcessTarget():
- >> def get(date, chip) # if not exist/up-to-date then make()
- >> def exist() # does the target exist?
- >> def uptodate() # is each dependency up to date?

10 Peta byte Target testbed with IBM GPFS

- Tiered storage system – 4 levels
- Data about Big Data - GPFS
- 400 Million files – big and small
- Research collaboration -> Upgrades
 - Performance: hardware, software, design
